**DETAILED ACTION**

***Election/Restrictions***

1. Applicant's election without traverse of Group II, claim 3 in the reply filed on August 10, 2006 is acknowledged.

***Information Disclosure Statement***

2. The information disclosure statement (IDS) submitted on July 19, 2004 was considered. However, it is noted that citation of the references by submission of the old forms would result in a printer rush as well as likely a mail room delay, due to the incorrect application numbers present and the expectation of the mail room that the references on the "892" form would be attached. In the future, Applicant is requested to place any references from an 892 onto the 1449, rather than simply attaching the 892. In the current case, the three references are simply included, but not mailed, on the current 892.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 3 is rejected under 35 U.S.C. 102(b) as being anticipated by Tok et al (J. American Academy of Dermatology (March 1998) 38(3):453-460).

Tok teaches a composition comprising:

Art Unit: 1637

- a) a substantially pure DNA molecule comprising a TCR gene sequence (see page 455, subheading "PCR", where the TCR gamma gene is amplified by PCR primers to result in a pure sequence)
- b) a buffer suitable for loading on a TTGE gel (see page 455, column 2, where the PCR product is concentrated to 10 ul and mixed with loading dye, specifically 0.4% bromophenol blue, 0.4% xylene cyanol and 25% Ficoll).
